

Containers - DevOps Journey from Development to Enterprise-grade Production Deployment

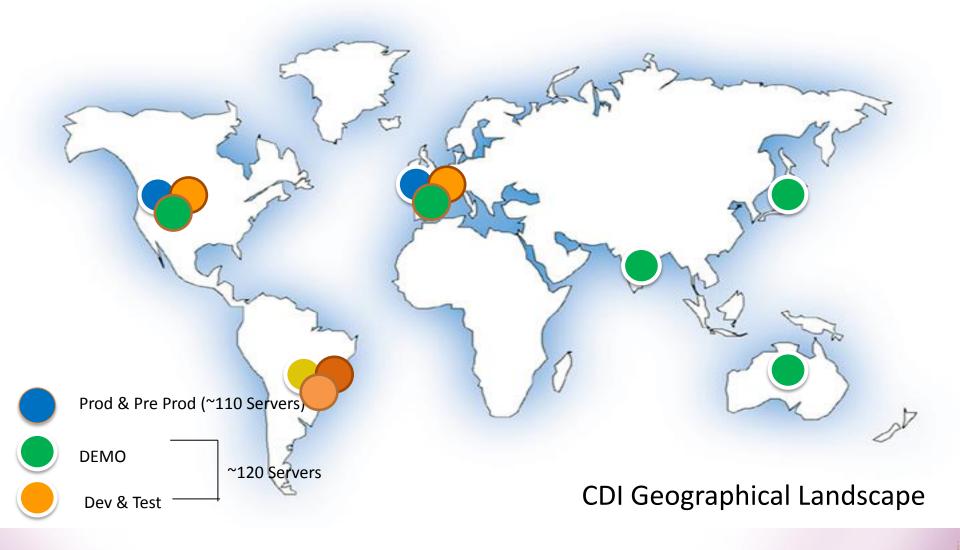

Nishant Kulkarni
Chief Infrastructure & Middleware Architect Cloud Platform Infrastructure & Middleware
with IBM GTS Lab.

Global Portfolio of Environments I manage

Share the experience

- I work as a Chief Infrastructure & Middleware Architect responsible for global system portfolio
- I am responsible for the management of large analytical solution on Cloud spread across 6 geos managing nearly peta byte of data every month.
- Complexity is every geo connects to 100s of data sources acquiring data and performing analytics
- We recently had an incident, where one of the middleware SSL certificate expired inside container stopping complete traffic. No clue what is happening.

OOPS!

It works on my machine! Not sure why failing in production!

Packaging

jar, war, ear, rar etc etc packages code but what about configurations?

Code configuration?

Runtime configuration?

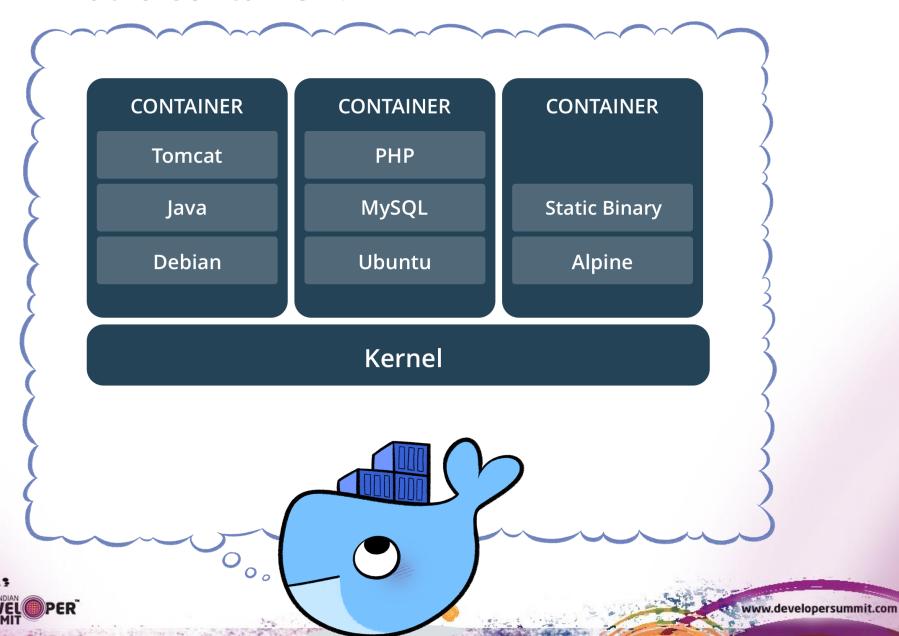

Containers

- Containers or Operating-system-level virtualization in the world of Information Technology is a standardized unit of software.
- A container image is a lightweight, stand-alone, executable package
 of a piece of software that includes everything needed to run it:
 code, runtime, system tools, system libraries, settings.
- Containerized software will always run the same, regardless of the environment.
- Has proved to avoid "OOPS! It worked on my machine"
- Code + Runtime + Compact OS + Configurations
- Containers enables developers to easily pack, ship, and run any application as a lightweight, portable, self-sufficient container, which can run virtually anywhere.

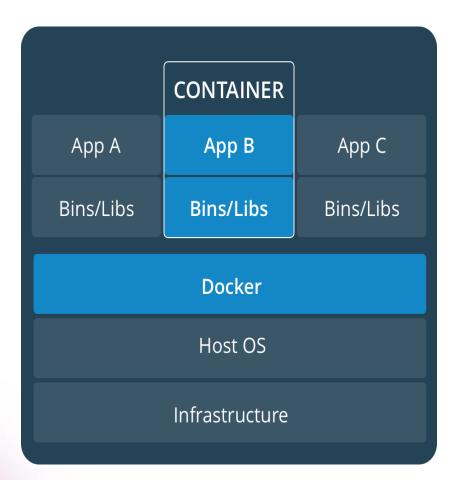

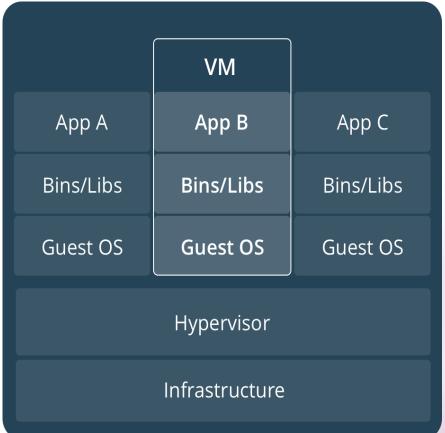

What is Container?

Container Vs VM

> **Continuous Release and Deployment**

Customer 2

Continuous Monitoring

Customer 3

Tools alone will not bring dev ops!

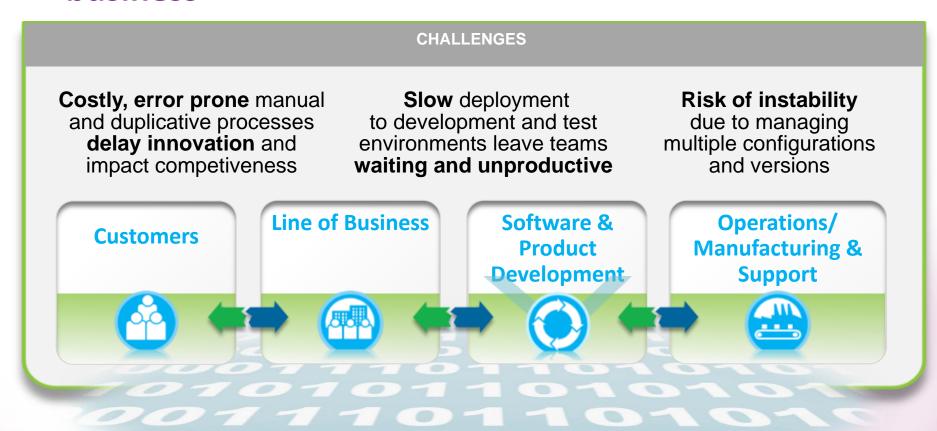

- Dev Ops ready code
- Integrated Security
- Process
- Platform
- Awareness of End to End integrated Dev Ops across teams. (Larger picture)

"GOVERNANCE" "TEAM"

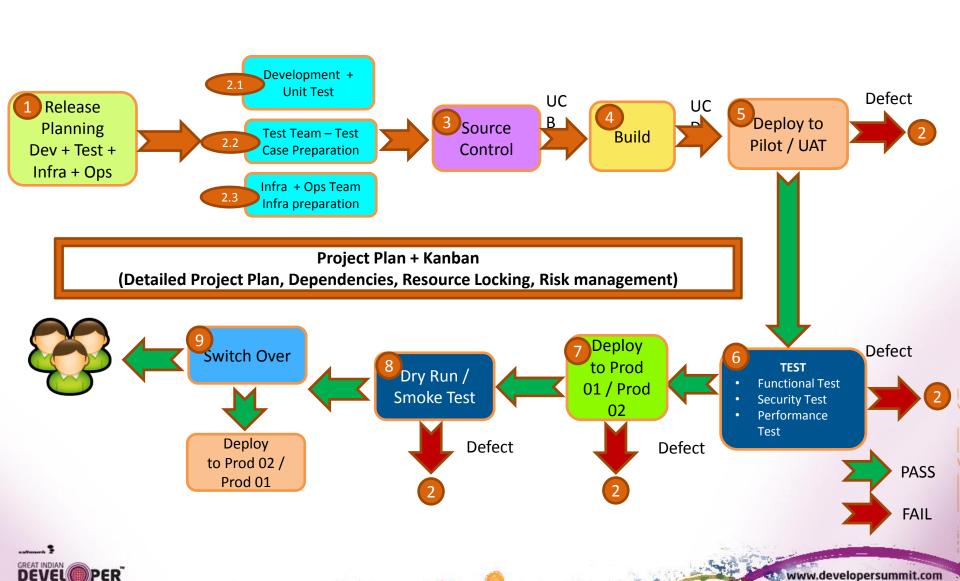

A lack of continuous delivery impacts the entire business

Secure Dev Ops Simplified-All Releases

Best Practices

- Security and governance
- Monitoring
- Storage
- Networking
- Container life cycle management
- Container orchestration
